

MicroCue²

MicroCue2 is the next generation of compact presentation cueing system, designed for the presenter on the move. Featuring dual USB ports for the simultaneous cueing of multiple versions of a slide presentation, MicroCue2 utilizes the renowned Interspace Industries wireless remote cueing system that provides full presenter mobility on stage. The control unit displays colour coded cues via a visual display as well as producing audible cue sounds which can be monitored via headphones if required. The MicroCue2 typically provides line-of-sight range in an enclosed venue that exceeds 75m.

The small, portable and ruggedly designed MicroCue2 can be set up in minutes and is powered via either of the USB connections to a computer or an external power pack (optional accessory). The presenter can signal either 'forward', 'back' or 'go to black' cues, during their presentation. Using the USB interfaces they can directly control either or both of the USB ports that are connected to computers running PowerPoint or KeyNote etc, presentation software.

Providing for the simultaneous control of a main and back-up, translated or a special notes versions of the presentation as required. The remote control cue buttons can also be programmed to control the presentation in specific ways (e.g. return to the beginning of the presentation, or jump to a specific slide number).

A new style narrow handset that includes a Green Laser is now available.
